

rovatti pompe

DATA SHEET

Heavy Duty Pumps

Rovatti Pompe is a well-established Italian pump manufacturer that produces a wide range of high quality large capacity Borehole, Surface and Waste Water pumps suitable for agriculture, water supply and industrial applications. Pumps principally use a mixture of cast iron and stainless steel materials and all are manufactured in modern factory facilities using high precision machinery providing efficient and reliable pumping solutions. A wide range is available, each pump being individually selected according to application and duty requirements and supplied to order.

BOREHOLE PUMPS

A wide range of radial and mixed-flow electric borehole pumps available in different executions and material combinations. Pumps are sized from 8" to 16" with motor ratings up to 400 kW that provide Flows up to 1200m³/hr and Heads up to 600m.

SURFACE PUMPS

Various pump options in either Vertical or Horizontal configurations of single or multi-stage designs with Flows up to 500m³/hr and Heads up to 400m.

ELECTRIC SUBMERSIBLE PUMPS

Waste Water submersible pumps available in free standing or auto-coupling configurations with single-channel, double-channel and vortex impellers suitable for waste water, slurry, active sludge sewage and grey water with solids and fibres and with flows up to 400m³/hr and Heads up to 40m.
